

Wild thing body mod

Take out wild thing and remove seat

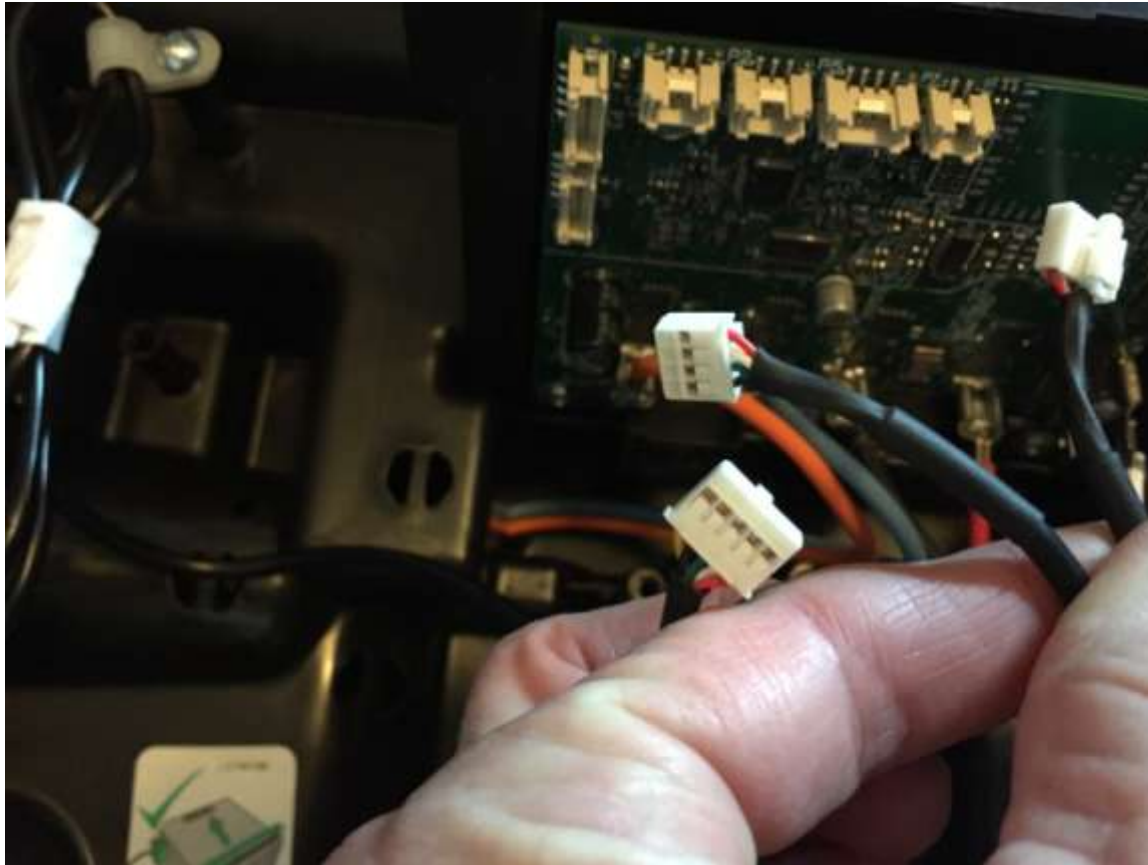

Remove the 4 screws holding the white controller box cover

Remove the remaining screws holding the control unit to the base.

Lift the control unit out to access all wires.

**controller (1 goes to the speed control in the back, and
1 each goes to a pink handle)**

Disconnect any other clips holding the wires in place.

Remove the 2 screws on each side holding the pick controller handle.

It should look like this.

Flip the wild thing over and remove 4 screws under the axle on each side.

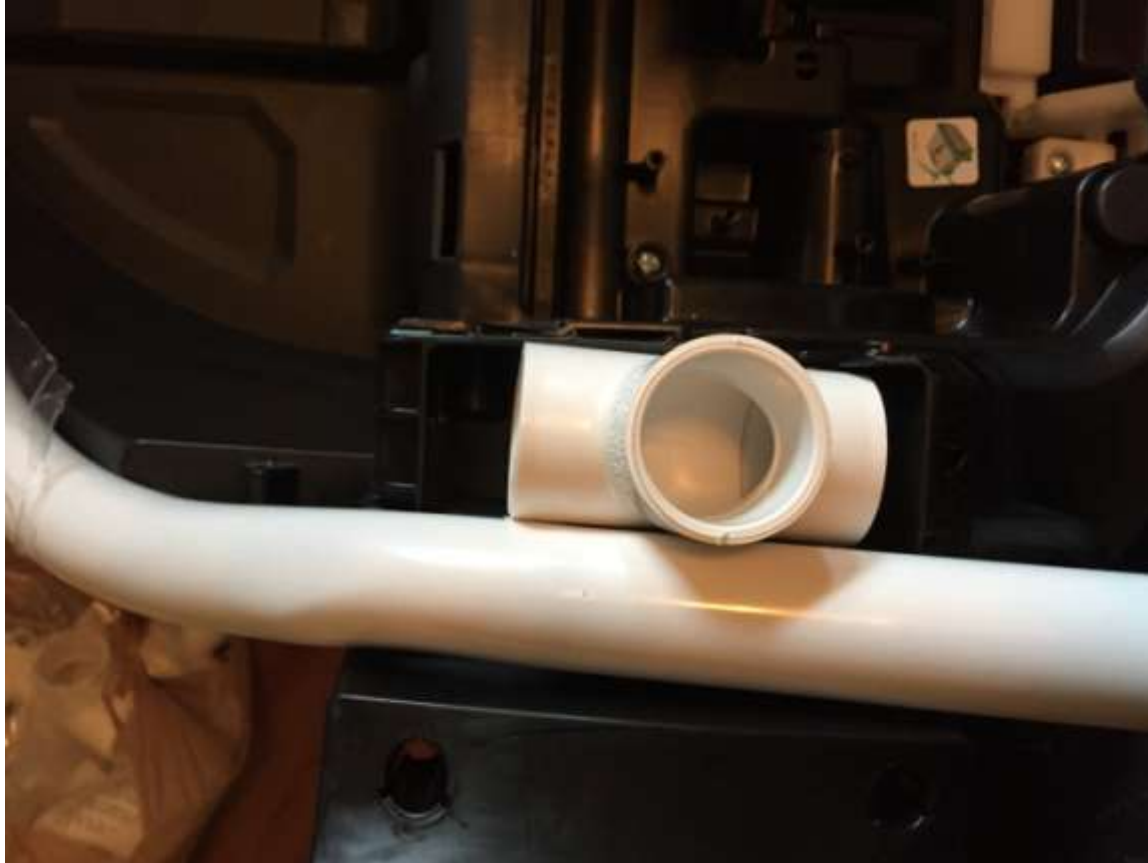

It should look like this. Flip the wild thing right side up.

Remove the cover holding the pick handle and gently lift up on the pink handle to help free it.

Slide it out of the holder and remove.

Place a 1" PVC "T" in the space where the handle was.

Replace the cover- you will need to pry the top part of the T thru the rectangular hole.

Replace the 2 screws on either side of the cover. Then flip the wild thing over and replace the 4 screws on each side holding the cover in place.

Add the wheels, and then the silver washer

Add the cap.

Screw the cap in. Then flip the wild thing back onto its wheels. Now you are ready to add a seat! If your seat does not have a tray, you can easily add a PVC mount
